serpa

Serpa protects people, prevents damage to electrical equipment, and provides sophisticated aesthetics.

Lots of cables.
One solution!

Q

More often than not, electronic home entertainment, household, and office equipment such as computers, printers, scanners, telephones and fax machines boast exquisite design. This, however, is where perfection ends. The cables of the various pieces of equipment are a mess that is unsightly and moreover poses a safety risk. Serpa cable wraps put things right.

With Serpa cable wraps you can arrange several cables, or cables which are too long, into a neat strand. Serpa's cable wraps are aesthetic, but unspectacular. They visually adapt to the cables, producing a clear picture which reflects tidiness and love of detail.

For good

Tidiness

Handy. Stylish.
And Lasting

Serpa cable wraps are very simple to handle: You wind them around your cables in no time at all. Thanks to their internal stress, they will hold the cables firmly together. You will not need any tools or aids. A special advantage of the Serpa cable wrap system, which is offered by no other system, is that the spirals are self-tightening.

Serpa cable wraps are a permanent solution. They can be removed and reused infinitely, they will retain their elasticity and resilience, and the spirals will bundle the cables for an almost unlimited period of time.

Serpa.
Ideal for private
and professional
applications.

Serpa cable wraps are suitable for use in any private household. They are ideal for tidying up TV, video and music racks. Furthermore, they have proved their worth in professional fields of application such as office technology (PCs, printers, scanners, telephones, etc.). Even in demanding conditions, they are the intelligent and reliable solution, e.g. for music events involving complex sound equipment.
